

## ck Blending Wheel

Cut out the truck and the wheel. Using an exacto knife, cut along the dotted rectangle to the left of the ck on the truck, make a small cross cut inside the circle above the right headlight and in the circle of the wheel. You may want to laminate each piece before attaching them. Attach the wheel behind the truck with a paper fastener (sometimes called a butterfly clip). Turn the wheel to see different onsets exposed before the ck to form words.
